

HTML Mini Project Assignments

Pure HTML · No CSS Required · Beginner Friendly

Submit as a .html file · No JavaScript needed

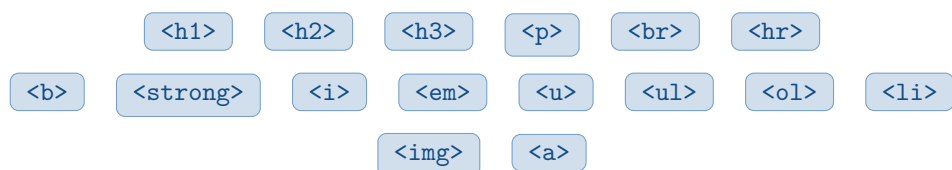

1 My Personal Profile Page

Beginner Level

Build a simple webpage that introduces yourself to the world.

Create a personal profile page about yourself (or a fictional character). The page should feel like a mini “About Me” website — with your name, photo, a short bio, your favourite things, and links to places you like.

TAGS YOU MUST USE

WHAT YOUR PAGE MUST INCLUDE

- Your name as the biggest heading using `<h1>`
- A profile photo (any image from the internet) using `<img>` with width, height, and alt attributes
- A short bio paragraph using `<p>` — make at least one word bold with `<b>` and one word italic with `<i>`
- A section heading “My Favourite Things” using `<h2>`
- An unordered list `<ul>` + `<li>` with at least 5 favourite things
- A section “My Top 3 Goals” as a numbered list using `<ol>`
- A `<hr>` divider between every section
- At least 2 clickable links using `<a href>` — one to a website, one as mailto:
- One line break `<br>` used naturally somewhere on the page

Bonus Challenge:

Add a **nested list** — for example, under “Food” write sub-items like your favourite dishes (Biryani, Pasta, etc.).

2 My Favourite Restaurant Menu

Intermediate Level

Build a restaurant menu webpage for a made-up (or real) restaurant.

Imagine you own a restaurant. Create its menu page! The page should have the restaurant name, a welcome message, a photo of a dish, and a full menu with at least 3 categories — Starters, Main Course, and Desserts — each with items and descriptions.

TAGS YOU MUST USE

`<h1>` `<h2>` `<h3>` `<h4>` `<p>` `<br>` `<hr>`
`<b>` `<i>` `<u>` `<ul>` `<li>`
`<img>` `<a>` `<title>` `<head>` `<body>`

WHAT YOUR PAGE MUST INCLUDE

- Restaurant name in `<h1>` and a tagline in `<h3>` — make the tagline *italic* using `<i>`
- A welcome paragraph using `<p>` with at least one **bold** word using `<b>`
- One food image using `<img>` with proper alt, width, and height attributes
- **3 menu sections** — Starters, Main Course, Desserts — each as `<h2>`
- Each section has items listed with `<ul>` + `<li>` — item name in `<b>`, description in normal text
- Price of each item in *italic* using `<i>` — e.g. *120*
- A `<hr>` divider after every section
- A “Contact Us” section at the bottom with a `mailto:` link and a Google Maps link
- The `<title>` tag inside `<head>` must show the restaurant name in the browser tab

Bonus Challenge:

Add a “Chef’s Special” subsection inside Main Course using `<h4>` with the dish name underlined using `<u>`.

Submission Guidelines

- Save your file as `project1.html` or `project2.html`
- Open it in a browser to check it looks correct before submitting
- Use only HTML tags — no `style=""` attributes, no `<style>` blocks, no `<script>` tags
- Make sure your `<html>`, `<head>`, and `<body>` tags are present and correctly nested
